

CCTV Mobile Solutions

Rapid Deployment

SERVICES AVAILABLE

- **NETWORK SOLUTIONS**
Complete solution from design, installation & server remote management
- **DATABASE DESIGN**
Have a tailor made database designed and created to suit your requirements
- **MEDIA CONVERSION & DATA RECOVERY**
Full media stream conversion covering all modern media platforms
- **CCTV & IT INTEGRATION**
View your CCTV remotely- we support most CCTV unit and DVR manufacturers

RAPID DEPLOYMENT CCTV SOLUTIONS THAT WORK FOR YOUR BUSINESS

Remote surveillance has been a popular and sometimes essential feature of modern DVR systems for some time. Remote access can be facilitated using a wide range of network topologies - xDSL, leased line, 802.11b/g WiFi networks or in some cases Microwave links. There are many applications where fixed line access is not available or practical such as construction sites, mobile CCTV, rapid deployment systems, or temporary CCTV installations.

With many modern DVR systems now supporting the H.264 codec, or their own advanced proprietary compression algorithms, the bandwidth available through 3G broadband networks (typically 384Kbit/sec upload on HSDPA), provides usable image quality and frame rates over 3G networks.

If your competitors have gained an edge in the market place by releasing 3G CCTV based systems, we can apply our knowledge and experience with 3G technology to your existing digital CCTV installations, allowing you to develop quick to market 3G CCTV solutions. With our help, you will be able to set up rapid deployment, mobile cctv, body worn, or even pole-mounted 3G-based systems in no time.

Please email sales or call us call us to discuss your 3G CCTV application in detail. You can also request a full demonstration of our 3G solution so you can witness the technology in action.
