

Dongle Emulation Complete Solution

SECURITY NEWS

Computer crime reports show that dongle theft is on the increase!

Don't become a victim, backup your dongle now.

Protect your investment

LOST YOUR EXPENSIVE DONGLE? CONSIDER OUR SOFTWARE SOLUTION!

Dongles get stolen (computer crime reports show that dongle thefts are on the increase)

Dongles restrict flexibility (i.e. roaming profile office)

Dongles break (the most common breakdown is pin plug failure due to misaligned insertion of the key)

Dongles can be difficult to replace if the original application is old and may result in paying for the complete application again if replacement is possible.

Dongle, hardware key or hardware lock is a piece of hardware responsible for software protection. Invented in 1982, dongles became very popular for software vendors who prefer to use computer independent protection.

The primary use of a dongle today is in very expensive software, usually aimed at a small core market. Very expensive rendering and audio mixing software, for example, often makes use of a dongle to ensure that people use authorized copy – which may cost many thousands of pounds for a single license. Computer Assisted Design (CAD) software is another area in which the use of a dongle is not uncommon.

By eliminating the actual hardware dongle it is now possible to perform your computer work without the risk of damaging your precious hardware lock.

Has your hardware lock ceased to operate? Has a disgruntled employee stolen your dongle worth thousands of pounds? Most software companies want to charge you the full retail price of the software when you lose your key! We offer a much more realistic alternative to purchasing the software you already paid thousands for! Contact us now so we can put you in control of software again using our dongle emulator solution!

We have developed the most advanced and reliable dongle backup utilities to provide you with a 100% working alternative to your original hardware dongle. We are well known for our reverse engineering skills developed over 20 years and guarantee we can offer a discreet emulation solution for all dongle protected applications.

Please email sales or call us to discuss your dongle requirement. We also provide a dongle bypass solution which enables you to operate your legally purchased software without any dongle by removing protection layers from the original source application!
